Prestige
Off Board Spark Ignition Kit
Installation Instructions

Kit Part Number

Kit numbers vary based on boiler size. Additional differences are needed at higher altitudes. Use the table below to confirm the correct replacement kit is installed on the boiler.

<table>
<thead>
<tr>
<th>Kit</th>
<th>Low Altitude (0 - 5,000 ft)</th>
<th>Hi Altitude (5,000 + ft)</th>
</tr>
</thead>
<tbody>

<table>
<thead>
<tr>
<th>1.1. V1 and V2 PA299 and PA399 Boilers</th>
</tr>
</thead>
<tbody>
<tr>
<td>There are two different blower/venturi arrangements that result in two different required ignition kits. The separate blower and venturi (V2) configuration applies to PA299s and PA399 with serial numbers after PA11700. Units with serial numbers below PA11700 have a single piece blower venturi (V1). Some V1 models may have been converted to the V2 configuration as well.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>1.2. Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>This kit (see Fig. 1 for details) replaces the existing igniter and its wiring, as well as the printed circuit board and the front cover of the control box on all Prestige boilers.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>This modification disables the Alarm Relay function which is used in several system configurations. Therefore, to allow the heating system configuration to be operational, some wire connections must be modified and some CTRL-Max settings changed, as required. Please refer to paragraph 1.6 for more information.</td>
</tr>
</tbody>
</table>

DANGER
Indicates the presence of a hazardous situation which, if ignored, will result in substantial property damage, serious injury, or death.

WARNING
Indicates a potentially hazardous situation which, if ignored, can result in serious injury or substantial property damage.

NOTICE
Indicates special instructions on installation, operation or maintenance, which are important to equipment but not related to personal injury hazards.

1.3. Initial task
Write down all the appliance settings and the chosen configuration for reference before bringing any change to the appliance. A reference table is provided on the last page of this document.

1.4. Boiler preparation

1.4.1 Required Tools and Material
- Flathead and Phillips Screwdriver
- Torx 20 Wrench

1.4.2 Combustion Chamber Insulation
1. The Ignition kit is shipped with a new combustion chamber 2in1 insulation/gasket. This may need to be installed with the new ignition kit. Boilers with serial number before those listed in the table below need to be replaced.

<table>
<thead>
<tr>
<th>Model</th>
<th>Serial Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>PA80</td>
<td>PA132660</td>

<tr>
<td>PA155</td>
<td>PA13163</td>
</tr>
<tr>
<td>PA175</td>
<td>PA127120</td>
</tr>
<tr>
<td>PA250</td>
<td>PA137281</td>
</tr>
<tr>
<td>PA299</td>
<td>PA127280</td>
</tr>
<tr>
<td>PA399</td>
<td>PA128691</td>
</tr>
<tr>
<td>PA Excellence</td>
<td>PA131819</td>
</tr>
</tbody>
</table>

2. If the Prestige serial number is after the listed number above, no change is required to the insulation/gasket.

3. Refer to the installation manual for installation procedure.

1.4.3 Procedure
4. Turn the boiler off by pressing the power switch
5. Disconnect electrical power at the external electric box

6. Shut off the gas supply to the boiler at the main manual shut off valve.
7. Remove boiler front panel to access the electronic board and the burner (See Fig. 2).
8. Disconnect the black ignition cable from the front of the electronic box.
9. Open the front cover of the electronic box (See Fig. 3). Discard the cover.
10. Disconnect the igniter wiring from the igniter. Discard.
11. Using the Torx wrench, release two screws and remove the igniter and gasket from the burner mounting plate. Discard all.

**NOTICE**

If the gasket is stuck on the igniter support, use a flat head tool and release it carefully from the surface. Be careful not to scratch the surface.
1.5. Kit installation

1.5.1 Required tools and material

- Wrench, Torx, 25
- Wrench, 10 mm

1.5.2 Installation of Igniter and Spark Generator

1. Install the new igniter, with its new gasket, on the burner mounting plate support (See Fig. 4).
2. Tighten 2 igniter screws by hand, then torque screws between 13 and 18 lbf-in. 

**NOTICE**

*Do not exceed the recommended max. torque value for the igniter attachment screws to prevent the igniter stems from distorting.*

3. Connect the ignition wire to the spark generator (1). Slide the protection sleeve (2) over the connector (See Fig. 5).

4. Remove the blower clamp screw (A). Retain for reinstallation. (See Fig. 6).

5. Locate the spark generator with bracket (B) on the blower clamp (A), aligning bracket hole with blower clamp hole. (See Fig. 6).
6. Reinstall the blower clamp screw (A) to secure the spark generator bracket to the blower clamp. Torque screw between 62 and 71 lbf-in.
7. Install the igniter cable boot so that the cable is smooth with no sharp bends and doesn’t curl on itself. See Fig. 7 & Fig. 8.

8. Connect the spark generator connector (C) to the new igniter.

1.5.3 Printed Circuit Board replacement

1. Disconnect violet wire (ionization current return) (See Fig. 13) from circuit board ground connection. Discard the wire.
2. Disconnect all wire terminals from the board.
3. Remove the circuit board and discard according to applicable local regulations (See Fig. 9).
4. Install new circuit board, making sure it is secured in the retaining clips (See Fig. 10).
5. Reconnect all wire terminals to the new circuit board terminals, except P14, 1&2 (See Fig. 13).

6. Route the wiring over the top of the control box.

7. Connect the spark generator power supply connector to the free receptacle of the P14 terminal (pins 1&2) of the PCB (See Fig. 14).

8. Connect the violet ground wire to the ground connection on the PCB, and on the ground lug located on the igniter bracket (See Fig. 14).

9. Connect the green ground wire from the spark generator to the ground tab located at the bottom right hand side of the chassis (See Fig. 14).

10. Protect the bare pins of former P14 connector using 2 Fast-on connectors.

11. Route the wiring (unconnected former P14 connector included) in the plastic retaining clip located at the rear of the control box.

12. Install the new control box front cover (See Fig. 11).

13. Connect the brown ionization cable at the front of the control box (See Fig. 11).

14. Reuse the Control Board box to ship the old control board to Triangle Tube and using the preprinted shipping label.

1.5.4 Follow-up Tasks

1. Perform any required configuration change in the wiring and CTRLMax setup according to Paragraph 1.6.

2. Reinstall the boiler front panel.

3. On the rating plate of the appliance, cover the “PA” of the Serial Number with the “PB” sticker provided with the kit. This will indicate that the boiler has been upgraded with the ignition kit, for future reference. See Fig. 12.

1.5.5 Testing

1. Start up the boiler, refer to the Installation Manual of your appliance for the correct procedure and settings.

2. Should hard ignition still occur, please check the condition of the combustion chamber 2-in-1 insulation. Refer to the Installation Manual of your appliance for the correct removal procedure. (See Fig. 15 and refer to following step).

3. Replace the combustion chamber 2-in-1 insulation if:
   • There are released stitches around the igniter location hole (See Fig. 15, Detail B).
   • The insulation cloth shows frayed areas around the igniter location hole (See Fig. 15Detail A)

Refer to the installation manual of your appliance for part reference and installation procedure.
Protect bare pins with Fast-on connectors, then store connector and wiring at the rear of control box with retaining clips.

1.6. Configuration Changes

1.6.1 Wiring

Following the printed circuit board replacement and wiring changes, the ALARM relay function is no longer available for the configurations that use it. Therefore, anything wired to the Alarm relay needs to be rewired to a different relay if required (see table below).

NOTICE

In some configurations, the Error function will no longer be available. Please contact your Triangle Tube assistance.
