To maintain the safety & longevity of your appliance, read and follow the maintenance schedule information throughout this manual.

If the information in this manual is not followed exactly, a fire or explosion may result causing substantial property damage, serious injury, or death.

For Your Safety

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

Notice

- Customer must register unit within thirty (30) days of installation in order to gain warranty coverage. See Warranty Card for details.
- Leave all documentation received with appliance with the owner for future reference.

Warning

- WHAT TO DO IF YOU SMELL GAS
  - Do not try to light any appliance
  - Do not touch any electrical switch; do not use any phone in your building.
  - Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
  - If you cannot reach your gas supplier, call the fire department.

Installation and service must be performed by a qualified installer, service agency or the gas supplier.

SAFETY INFORMATION

IMPORTANT EXTRACTS FROM THE CONSUMER PRODUCT SAFETY COMMISSION WEBSITE
WWW.CPSC.GOV

Carbon monoxide is produced by burning fuel. Therefore, any fuel-burning appliance in your home is a potential CO source.

When cooking or heating appliances are kept in good working order, they produce little CO. Improperly operating appliances can produce fatal CO concentrations in your home.

What should you do?

Proper installation, operation, and maintenance of fuel-burning appliances in the home is the most important factor in reducing the risk of CO poisoning.

Make sure appliances are installed according to the manufacturer’s instructions and the local codes. Most appliances should be installed by professionals.

Always follow the appliance manufacturer’s directions for safe operation.

Have the heating system (including chimneys and vents) inspected and serviced annually by a trained service technician.

Examine vents and chimneys regularly for improper connections, visible cracks, rust or stains.

Look for problems that could indicate improper appliance operations:
- Decreased hot water supply
- Furnace unable to heat house or runs continuously
- Sooting, especially on appliances and vents
- Unfamiliar, or burning odor
- Increased moisture inside of windows

Operate portable generators outdoors and away from open doors, windows, and vents that could allow CO to come indoors.

In addition, install battery-operated CO alarms or plug-in CO alarms with battery back-up in your home. Every home should have a CO alarm in the hallway near the bedrooms in each separate sleeping area. The CO alarms should be certified to the requirements of the most recent UL, IAS, or CSA standard for CO alarms. Test your CO alarms frequently and replace dead batteries. A CO alarm can provide added protection, but is no substitute for proper installation, use and upkeep of appliances that are potential CO sources.

Symptoms of CO poisoning

The initial symptoms of CO poisoning are similar to the flu (but without the fever). They include:
- Headache
- Fatigue
- Shortness of breath
- Nausea
- Dizziness

If you suspect that you are experiencing CO poisoning, get fresh air immediately. Leave the home and call for assistance from a neighbor’s home. You could lose consciousness and die from CO poisoning if you stay in the home.

Get medical attention immediately and inform medical staff that CO poisoning is suspected. Call the Fire Department to determine when it is safe to reenter the home.
IMPORTANT SAFETY INFORMATION FOR
THE HOMEOWNER AND THE TECHNICIAN

This manual contains important information with respect to
the operation and maintenance of the appliance.

This manual must be provided to the Homeowner, who will
keep it in a safe place for future reference.

Triangle Tube accepts no liability for any damage,
injury, or loss of life resulting from incorrect
installation, alteration of any factory supplied
parts, or the use of parts or fittings not specified by
Triangle Tube. If there is a conflict or doubt about the
proper installation of the unit or any factory supplied
replacement parts please contact Triangle Tube
Technical Support.

DEFINITIONS

The following terms are used throughout this manual
to bring attention to the presence of potential hazards
or to important information concerning the product.

**DANGER**

Indicates the presence of a hazardous situa-
tion which, if ignored, will result in substantial
property damage, serious injury, or death.

**WARNING**

Indicates a potentially hazardous situation
which, if ignored, can result in substantial
property damage, serious injury, or death.

**CAUTION**

Indicates a potentially hazardous situation
which, if ignored, can result in minor property
damage, or injury.

**NOTICE**

Indicates special instructions on installation,
operation or maintenance, which are import-
ant to the equipment but not related to person-
al injury hazards.

**BEST PRACTICE**

Indicates recommendations made by Triangle
Tube for the installers, which will help to ensure
optimum operation and longevity of the equip-
ment.

STOP !
READ BEFORE SERVICING

Failure to adhere to the guidelines within this manual
can result in substantial property damage, serious
injury, or death.

TECHNICIAN: When calling or writing about the INSTINCT,
please have the boiler model and serial number available.

**DANGER**

- Do not use this appliance if any part has been under
  water. Immediately call a qualified service technician
to inspect the appliance and to replace any part of
the control system which has been under water.

- Avoid electrical shock when servicing the
  appliance, by disconnecting the electrical supply
prior to performing service or maintenance.

- Failure to comply with these instructions will
  result in substantial property damage, serious
  injury, or death.

**WARNING**

- The INSTINCT Installation manual is for use only
  by a qualified heating installer/service technician.
The homeowner will use this User’s Information

- What to do if you smell gas:
  - Do not try to light any appliance
  - Do not touch any electrical switch; do not use
  any phone in your building.
  - Immediately call your gas supplier from a
neighbor’s phone. Follow the gas supplier’s
instructions.
  - If you cannot reach your gas supplier, call the
fire department.

- Do not store or use gasoline or other flammable
vapors and liquids in the vicinity of this or any
other appliance.

- Prior to installing this product, the qualified
installer must read all instructions included in
this manual and all accompanying manuals/
documents with this appliance.

- All installation steps required in these manuals
must be performed in the proper order given.

- This product must be maintained / serviced and
inspected annually by a qualified service technician.

- Failure to comply with these instructions can
result in substantial property damage, serious
injury, or death.
PRODUCT AND SAFETY INFORMATION

WARNING

- A byproduct of any gas fired appliance is carbon monoxide. Triangle Tube requires the installation of a minimum of two (2) hard-wired carbon monoxide detectors with an alarm and battery back-up; one in the mechanical room where the boiler is located and another installed in the living area outside the bedroom(s) for all installations. Consult the local authority having jurisdiction for any additional carbon monoxide detector requirements in your area. See Chapter 2 of the INSTINCT Installation & Maintenance Manual for additional carbon monoxide detector requirements in Massachusetts.

- Failure to comply with these instructions can result in substantial property damage, serious injury, or death.

Service and Maintenance:

- Allow the unit to cool down prior to servicing to avoid severe burns.

- The INSTINCT must be maintained as outlined in this manual and have at least annual service performed by a qualified service technician to ensure unit/system reliability.

INSTINCT Operation

- Do not block flow of combustion air to the INSTINCT. If the combustion air blockage is easily accessible and removable, then remove it. If blockage is not obvious or cannot be removed, have the unit and system checked by a qualified service technician. If in doubt turn off your INSTINCT Boiler.

- Do not allow contaminated air to enter the unit’s combustion air inlet. See page 3 for details.

- The INSTINCT is equipped with a low water cutoff device. The boiler and system piping must be filled and pressurized to 12 psig prior to startup. The unit will shut down if the pressure falls below 7.2 psig.

- Should overheating occur or if the gas supply fails to shut off, DO NOT turn OFF or disconnect the electrical supply to the pump. Instead, turn OFF the manual gas control valve external to the appliance.

- Combustion Readings - For your safety and to benefit from best warranty terms, ask your installer to provide combustion readings that are to be registered with Triangle Tube. See Warranty Card. Combustion readings should be checked at least annually for safe and reliable operation.

Boiler and System Water

- Have the boiler and system water chemistry checked at least annually by a qualified service technician.

- Do not use petroleum-based cleaning or sealing compounds in the boiler or system. Gaskets and seals in the system may be damaged, which can result in substantial property damage.

- Do not use any product not specifically designed for boiler/hydronic heating systems. Serious damage to the unit, piping system, personnel and/or property may result.

- Continual fresh makeup water will reduce the life of the INSTINCT. Addition of oxygen can cause internal corrosion in the system components. All leaks in the system must be repaired at once to prevent excessive makeup water.

- Do not add cold makeup water when the appliance is hot. Thermal shock can potentially cause cracks in the heat exchanger.

- Failure to comply with these instructions can result in substantial property damage, serious injury, or death.

CAUTION

- It is prohibited to carry out any modifications to the appliance without prior written consent from Triangle Tube.

- Faulty parts must only be replaced by genuine Triangle Tube factory parts.

- Failure to comply with these instructions can result in minor property damage, or injury.

NOTICE

- The homeowner is only permitted to carry out the basic set-up operations (EZ Setup) after he has received all relevant instructions from the installer. Any other setup must be carried out by a qualified installer.

- In case of any anomaly, please call your qualified service technician.

- Make sure to reference the unit’s model number and serial number from the rating label when inquiring about service or troubleshooting.

- Triangle Tube reserves the right to change the technical characteristics, components and features of its products without prior notice. Check for an updated version of this manual at www.triангletube.com.
CHAPTER 1 - COMBUSTION AIR CONTAMINATION

**WARNING**
If the INSTINCT combustion air inlet is located in an area likely to cause or contain contamination, or if products which could contaminate the air cannot be removed, the combustion air must be repiped and terminated at another location. Contaminated combustion air will damage the unit and its burner system, and can result in substantial property damage, serious injury, or death.

**DANGER**
- Do not operate the INSTINCT if the combustion air inlet is located near a laundry room or pool facility. These areas will always contain hazardous contaminants.
- Pool, laundry, common household, and hobby products often contain fluorine or chlorine compounds. When these chemicals pass through the burner and vent system, they can form strong acids. These acids will corrode the heat exchanger, burner components, and vent system, causing serious damage and possible flue gas spillage or water leakage into the surrounding area.
- Please read the information listed below. If contaminating chemicals are located near the area of the combustion air inlet, the installer must pipe the combustion air inlet to an area free of these chemicals.
- Failure to comply with these instructions will result in substantial property damage, serious injury, or death.
- The INSTINCT boiler is classified as a Category IV appliance. This utilizes uncontaminated indoor or outdoor air for appliance combustion. A direct vent installation uses the outdoor air. Air supply, combustion chamber, heat exchanger and evacuation of POC (products of combustion) for this type of appliance is sealed with respect to the room in which the appliance is installed.
- An in-direct installation uses uncontaminated indoor air for appliance combustion.

- When the air for combustion is taken from the room an air grille must be installed by the contractor.

**DANGER**
- Ensure the vent grilles are free from obstruction at all times. Do not be tempted to restrict or cover the air grilles as it could cause serious injury, or death.

Potential contaminating products
- Spray cans containing chloro/fluorocarbons
- Permanent Wave Solutions
- Chlorinated wax
- Chlorine based swimming pool chemicals / cleaners
- Calcium Chloride used for thawing ice
- Sodium Chloride used for water softening
- Refrigerant leaks
- Paint or varnish removers
- Hydrochloric acid / muriatic acid
- Cements and glues
- Antistatic fabric softeners used in clothes dryers
- Chlorine-type bleaches, detergents, and cleaning solvents found in household laundry rooms
- Adhesives used to fasten building products and other similar products

Areas likely to contain these products
- Dry cleaning / laundry areas and establishments
- Beauty salons
- Metal fabrication shops
- Swimming pools and health spas
- Refrigeration Repair shops
- Photo processing plants
- Auto body shops
- Plastic manufacturing plants
- Furniture refinishing areas and establishments
- New building construction
- Remodeling areas
- Garages with workshops
CHAPTER 2 - MAINTENANCE SCHEDULES

2.1. Service Technician

At least on an annual basis the following maintenance should be performed by a qualified service technician:

**General**
- Attend to any reported problems.
- Inspect the interior of the boiler jacket area; clean and vacuum if necessary.
- Clean the condensate drain assembly and fill with fresh water.
- Check boiler fluid pH on systems.
- Check for leaks, both inside and outside the unit: water, gas, flue and condensate.
- Verify vent piping and air inlet piping are in good condition, sealed tight and properly supported.
- Check boiler water pressure, piping and expansion tank.
- Check control settings.
- Check ignition electrode (sand off any white oxide; clean and reposition).
- Check ignition wiring and ground wiring.
- Check all control wiring and connections.
- Check burner flame pattern (stable and uniform).
- Check carbon monoxide detectors.

**Additional items if combustion or performance is poor:**
- Clean heat exchanger and flue ways.
- Remove burner assembly and clean burner head using compressed air only.

Service Technician maintenance procedures can be found in Chapter 17 of the INSTINCT Installation and Maintenance manual.

Once the maintenance items are completed, review the service with the owner.

2.2. Owner Maintenance

**Periodically:**
- Check the area around the unit.
- Check and remove any blockage from the combustion air inlet and ventilation openings.
- Check the temperature and pressure gauges.

**Monthly:**
- Check vent piping.
- Check combustion air inlet piping or air grilles.
- Check the pressure relief valve.
- Check the condensate drain system.

**Every 6 months:**
- Check boiler piping and gas supply piping for corrosion or potential signs of leakage.
- Operate the pressure relief valve.
- Check carbon monoxide detectors.

Follow the maintenance procedures given in Chapter 3 on page 5 of this manual. Failure to perform the service and maintenance or follow the directions in this manual can result in damage to the INSTINCT or system components, resulting in substantial property damage, serious injury, or death.
INTENTIONALLY LEFT BLANK
CHAPTER 3 - MAINTENANCE PROCEDURES

3.1. Owner Maintenance Procedures

**WARNING**

The INSTINCT must be inspected and serviced annually, preferably at the start of the heating season, by a qualified service technician. In addition, the owner maintenance and care of the unit as outlined in Chapter 2 on page 3 and further explained in this chapter should be performed to assure maximum safety, efficiency and reliability of the unit. Failure to service and maintain the INSTINCT and the system components can result in equipment failure, resulting in substantial property damage, serious injury, or death.

**WARNING**

In the case of In-direct vent installation the air openings provided by the installer to supply ventilation and combustion air are essential for safe operation of the appliance. The user must respect the importance of these air openings and ensure that they are not partially or fully blocked under any condition. Failure to ensure free uncontaminated air flow through the openings can result in substantial property damage, serious injury, or death.

**NOTICE**

The following information provides detailed instructions for completing the owner maintenance items outlined in the maintenance schedule in Chapter 2 on page 3.

3.2. Daily Maintenance

3.2.1 Check Surrounding Area

**WARNING**

Eliminate all the materials listed in Chapter 1 on page 1 from the area surrounding the unit and from the vicinity of the combustion air inlet.

If contaminates are found:

- Remove products immediately from the area. If they have been there for an extended period, call a qualified service technician to inspect the unit for possible damage from corrosion.

- If products cannot be removed, immediately call a qualified service technician to re-pipe the combustion air inlet piping and locate the combustion air intake away from the contaminated areas.

Failure to comply with these instructions can result in substantial property damage, serious injury, or death.

- Verify that the area surrounding the INSTINCT is free of combustible / flammable materials or flammable vapors or liquids. Remove immediately if found.

- Verify that combustion air inlet area is free of any contaminates. Refer to the materials listed in Chapter 1 on page 1 of this manual. If any of these products are in the area from which the unit takes its combustion air, they must be removed immediately or the combustion air intake must be relocated to another area.

**WARNING**

3.2.2 Check Ventilation Air Openings

Verify that all ventilation openings to the mechanical room or building are open and unobstructed.

Check and verify that the vent termination and the combustion air intake are free of debris and obstructions. Remove any debris on the air intake or flue exhaust openings. If removing the debris does not allow the unit to operate correctly, contact a qualified service technician to inspect the unit and the vent / combustion air system.
CHAPTER 3 - MAINTENANCE PROCEDURES

3.2.3 Check Temperature Display and Pressure Gauge

• Ensure the pressure reading on the pressure gauge does not exceed 25 psig. Higher pressure readings may indicate a problem with the expansion tank.
• Ensure the temperature on the display panel does not exceed 194ºF. Higher temperature readings may indicate a water flow problem.
• Contact a qualified service technician if problem persists.

**WARNING**

The annual service and inspection must ensure the venting and air supply are maintained in a correct and safe working condition. Damaged vent and air supply can result in serious injury, or death.

3.3. Monthly Maintenance

3.3.1 Check Vent and Combustion Air Piping

• Visually inspect the venting system and combustion air piping for blockage, deterioration of gaskets or leakage. Contact a qualified service technician immediately if any problems are found.

**WARNING**

In the case of In-direct vent installation the air openings provided by the installer to supply ventilation and combustion air are essential for safe operation of the appliance. The user must respect the importance of these air openings and ensure that they are not partially or fully blocked under any condition. Failure to ensure free uncontaminated air flow through the openings can result in substantial property damage, serious injury, or death.

**DANGER**

Failure to inspect the vent system and combustion air inlet piping and to have any conditions repaired, will result in serious injury, or death.

3.3.2 Check Pressure Relief Valve

1. Visually inspect the pressure relief valve and the relief valve discharge pipe for signs of weeping or leakage.
2. If the pressure relief valve weeps often, the expansion tank may not be operating properly. Immediately contact a qualified service technician to inspect the unit and system.
3.3.3 Check Condensate Drain System

1. Ensure condensate drain assembly is firmly secured to bottom of the unit. See Fig. 1 on the right. Ensure the Retention clip is secure. See Fig. 2 (Solo Models only).

**WARNING**

Do not operate the boiler without the factory-supplied condensate drain assembly installed. Operation of the boiler without the condensate drain assembly installed can result in property damage, serious injury, or death.

2. While the unit is running, check the discharge end of the condensate drain tubing. Ensure no flue gas is leaking from the condensate drain tubing by holding your fingers near the opening.

3. If you notice flue gas leaking, turn off the unit and contact a qualified service technician to inspect the unit and condensate drain assembly.

4. Ensure the condensate drain tubing is not blocked by pouring water through the fill plug port on the condensate drain assembly. The water should flow out of the end of the drain tubing. If water does not appear at the end of the drain tubing, contact a qualified service technician to inspect and clean the condensate drain assembly.

5. To fill the condensate drain assembly, remove the fill plug from the condensate assembly. Slowly pour water into the assembly until water appears at the end of the drain tubing. Stop filling and replace plug.
CHAPTER 3 - MAINTENANCE PROCEDURES

3.4. 6-Month Maintenance

3.4.1 Check Water and Gas Piping

1. Remove the boiler front jacket panel and perform a gas leak inspection per steps 1 through 6 of the Operating Instructions on page 9. If gas odor or a leak is detected, immediately shut down the unit following procedures on page 9. Call a qualified service technician.

2. Visually inspect for leaks around the internal boiler water connections and around the heat exchanger. Visually inspect the external system piping, circulators, and system components and fittings. Immediately call a qualified service technician to repair any leaks.

**WARNING**

Have leaks fixed at once by a qualified service technician. Failure to comply can result in substantial property damage, serious injury, or death.

3.4.2 Operate Pressure Relief Valve

1. Before proceeding, verify that the relief valve outlet has been piped to a safe place, avoiding any possibility of scalding from hot water.

**WARNING**

To avoid water damage or scalding, a discharge line must be connected to the relief valve outlet and directed to a safe place of disposal. This discharge line must be installed by a qualified service technician in accordance with the INSTINCT installation manual. The discharge line must be terminated so as to eliminate possibility of severe burns or property damage should the valve discharge. Failure to comply can result in substantial property damage, serious injury, or death.

2. Read the pressure gauge to ensure the system is pressurized. Lift the relief valve top lever slightly, allowing water to relieve through the valve and discharge piping.

3. If water flows freely, release the lever and allow the valve to seat. Watch the end of the relief valve discharge pipe to ensure that the valve does not weep after the line has had time to drain. If the valve weeps, lift the lever again to clean the valve seat. If the valve does not properly seat and continues to weep afterwards, contact a qualified service technician to inspect the valve.

4. If water does not flow from the valve when you lift the lever completely, the valve or discharge line may be blocked. Immediately shut the unit down per the instructions on page 9. Call a qualified service technician to inspect the valve and discharge line.

3.4.3 Check Carbon Monoxide Detectors

Verify that at least two (2) carbon monoxide detectors are installed and operating properly. One must be installed in the mechanical room where the INSTINCT is located and another installed in the living area outside the bedroom(s). Contact a qualified service technician if carbon monoxide detectors are not installed or operating properly.
CHAPTER 4 - OPERATING INSTRUCTIONS

FOR YOUR SAFETY, READ BEFORE LIGHTING

WARNING

If you do not follow these instructions exactly, a fire or explosion may result, causing substantial property damage, serious injury, or death.

A. This appliance does not have a pilot. It is equipped with an ignition device which automatically lights the burner. DO NOT try to light the burner by hand.

B. BEFORE OPERATING, smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS

- Do not try to light any appliance.
- Do not touch any electric switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

C. Use only your hand to turn the external manual gas valve. Never use tools. If the valve will not turn by hand, don’t try to repair it; call a qualified service technician. Force or attempted repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

OPERATING INSTRUCTIONS

1. STOP! Read the safety information above. This appliance is equipped with an ignition device which automatically lights the burner. DO NOT try to light the burner by hand.

2. Set room thermostat(s) to lowest setting. Turn the external manual gas valve handle clockwise to "CLOSE" (valve handle must be perpendicular to gas piping).

3. Turn the service switch on the appliance control panel OFF.

4. Remove the front jacket panel on the unit.

5. Wait five (5) minutes to clear out any gas. If you then smell gas in the jacket enclosure or around the unit, STOP! Follow "B" in the safety information above. If you don't smell gas, go to the next step.

6. Turn the external manual gas valve handle counterclockwise to "OPEN" gas supply (valve handle shall be parallel to gas piping).

7. Turn the service switch on the appliance control panel "ON".

8. Set room thermostat(s) to desired setting(s).

9. The appliance control panel display will show the current operating status on the Status Line at the bottom of the screen. "Standby" means there is no call for heat (all thermostats are satisfied). "CH Demand" indicates a space heating call has been received. "DHW Demand" indicates a domestic hot water call has been received. A flame icon will be displayed when the unit is fired.

10. If the unit will not operate, follow the instructions "To Turn Off Gas to Appliance" and call your service technician or gas supplier.

11. Replace the front jacket panel. Make sure the panel is seated firmly in place and all mounting screws are tightened.

TO TURN OFF GAS TO APPLIANCE

1. Set the room thermostat to lowest setting.

2. Turn the service switch on the appliance control panel to "OFF".

3. Turn the external manual gas valve handle clockwise to "CLOSE".
CHAPTER 5 - CTRLMAX OPERATION

The CTRLMax Boiler Management System is designed to be flexible yet easy to use. CTRLMax monitors and controls the INSTINCT to provide heat as efficiently as possible.

All CTRLMax features are easy to use through a graphical display where information is presented either graphically or in plain English, so code charts are not required. Fig. 3 below shows an CTRLMax display example of the INSTINCT Solo fired for a domestic hot water demand.

5.1. CTRLMax Navigation

The CTRLMax navigation is performed through soft keys that react to the touch and emit a short beep when tapped.

**NOTICE**

*Exert a light and short touch (tap) on the soft keys to activate their function. Holding the touch too long will not generate any reaction from the CTRLMax, unless it is a combination of soft keys meant to be touched simultaneously for a determined duration, as instructed in this manual. The arrow keys can also be held longer to increase or decrease values faster.*

Navigation is performed through four arrow soft keys \( \uparrow, \downarrow, \leftarrow, \rightarrow \) with a center soft key \( \bigcirc \) (OK /Reset functions) for making selections and entering information. The Main Menu can be entered from the Home Screen by touching the center soft key \( \bigcirc \).

To shut down the unit, touch the \( \bigcirc \) soft key.

**DANGER**

*When touching the \( \bigcirc \) soft key, the unit shuts down but is not isolated from power supply. Therefore, live current is still present in the unit. For your safety, disconnect electrical power supply to the unit before servicing or making any electrical connections to avoid possible electric shock hazard. Failure to do so can cause serious injury, or death.*

**NOTICE**

*• When shutting down using the \( \bigcirc \) soft key, the appliance will not react to any heat demand. However, the basic appliance protection functions (such as frost protection, etc.) remain active.*

*• In addition, the arrow soft keys are no longer illuminated, and the \( \bigcirc \) soft key lighting is dimmed.*

The menu system utilizes icons to represent each selection. The current selected menu is displayed as a reversed image with a text description shown at the top of the display. Menus can be entered by selecting the the desired icon (highlights) using the arrow soft keys.

![CTRLMax User Interface](image)
CHAPTER 5 - CTRLMAX OPERATION

5.2. CTRLMax Menu Structure
CHAPTER 5 - CTRLMAX OPERATION

5.3. Home Screen

The Home Screen presents status information in a very user friendly way so that the current state of the boiler can be quickly accessed.

- **Screen backlight** - it will illuminate when any soft key is touched, and remain illuminated for five minutes.

- **Screen brightness** - it can be adjusted at the Home screen by touching and holding simultaneously the and soft keys for 2 seconds. Touch the and soft key to increase or decrease the contrast. Touch to end the process.

### Main Icons of CTRLMax display

- **Central Heating** - indicates information related to central/space heating.
- **DHW** - indicates information related to Domestic Hot Water.
- **Home** - to go back to the home screen.
- **Back** - to go back to the previous screen.
- **Warm Weather Shutdown** - displays on the home screen when the outdoor temperature reaches the Warm Weather Shutdown temperature.
- **Reset** - to reset the system to the factory settings.
- **Settings** - to access controller settings (language, units, etc.).
- **Easy Setup** - to quickly adjust the most common settings.
- **CH/DHW operation** - to enable/disable the central/space heating or Domestic Hot Water functions
- **Information** - to get information on the boiler.

---

The model is indicated at the top of the screen. The INSTINCT is represented in the center of the Home Screen. Basic operating information such as supply and return temperatures are displayed as well as current burner status.

**Radiator icon:** indicates that a central heating call has been received. A small number 1 or 2 indicates which CH calls are active.

**Faucet icon:** indicates that a DHW call has been received.

**Circulator icons:** indicate which circulators are currently powered.

**Status line:** displays the current operating state of the boiler.

---

A flame symbol is displayed when the unit is fired. The flame size changes to indicate the current firing rate.

**Basic information:** The user can toggle through items using the and soft keys to view Target, Supply, Return, Domestic, Outdoor, System and Mix Zone temperatures, DHW flow.
CHAPTER 5 - CTRLMAX OPERATION

5.4. Status Line Messages

Standby - Indicates that the INSTINCT is ready to respond when a demand is received.

CH Demand - A central heating call has been received.

DHW Demand - A domestic hot water call has been received.

CH/DHW Demand - Central heating and domestic hot water calls are being received simultaneously. Both calls are being satisfied simultaneously because domestic hot water priority has been disabled.

DHW Priority - Central heating and domestic hot water calls are being received simultaneously. Domestic hot water call is being satisfied first because it has priority over central heating calls.

Priority Timeout - Central heating and domestic hot water calls are being received simultaneously. The domestic hot water priority time limit has been exceeded. Priority will now switch back and forth between central heating and domestic hot water calls until one call is satisfied.

External Demand - An external modulation call has been received.

Slave Operation - The INSTINCT is a slave in a cascade system.

Manual Operation - The burner or circulators have manually been enabled in the Installer Menu.

CH Burner Delay - The burner will not fire until the call blocking time has elapsed.

DHW Burner Delay - The burner will not fire until the call blocking time has elapsed.

CH Setpoint Reached - The burner is not fired because the supply/system water temperature exceeds the setpoint. The central heating circulator(s) continue(s) to operate and the burner will fire again once the supply/system water temperature drops below the setpoint.

DHW Setpoint Reached - The burner is not fired because the supply/system water temperature exceeds the setpoint. The domestic circulator(s) continue(s) to operate and the burner will fire again once the supply/system water temperature drops below the setpoint.

CH Post Pump - The central heating circulator(s) is/are running to remove heat from the INSTINCT at the completion of a call.

DHW Post Pump - The domestic hot water circulator(s) is/are running to remove heat from the INSTINCT at the completion of a call.

Freeze Protection - The burner is fired because the freeze protection feature has been activated. Freeze protection will end once the supply/system water temperature is raised to 60°F [16°C].

Boiler Protection - The burner firing rate is being reduced because of an excessive difference between the boiler supply and return temperatures. The firing rate will begin increasing once the temperature difference is less than 45°F [25°C].

Low Water Pressure - The system pressure has dropped to 10.1 psi. The INSTINCT will still respond to calls until the pressure drops below 7.2 psi. Increase system pressure to 14.5 psi to clear Low Water Pressure warning.

Lockout Description - The lockout which currently has the INSTINCT shut down is displayed.
5.5. Main Menu

The Main Menu can be entered from the Home Screen by touching the soft key. The menu system utilizes icons to represent each selection. The currently selected menu is displayed as an inversely imaged selection with a text description shown at the top of the display. Menus can be entered by scrolling through the icons using the arrow soft keys, highlighting the desired icon and touching the soft key.

5.6. EZ Setup

The EZ Setup menus provide a simple way to quickly customize CTRLMax for each installation. EZ Setup prompts the user to make selections which allows the INSTINCT to be setup very quickly without searching through long lists of settings and manually making adjustments.
5.7. CH / DHW Operation

The CH / DHW Operation Menu can be entered from the Main Menu by selecting the CH / DHW Operation icon and touching the soft key. The CH / DHW Operation Menu provides a simple way to disable either the central heating or domestic hot water functions of the INSTINCT.

Heating Operation can be enabled and disabled by selecting the radiator icon and touching the soft key to toggle operation between enabled and disabled. A radiator icon with an X through it indicates that the heating function is disabled. This icon is also displayed on the Home Screen when disabled.

Domestic Hot Water Operation can be enabled and disabled by selecting the faucet icon and touching the soft key to toggle operation between enabled and disabled. A faucet icon with an X through it indicates that the domestic hot water function is disabled. This icon is also displayed on the Home Screen when disabled.
5.8. Language Selection

The Select Language Menu can be entered from the Main Menu by selecting the Select Language icon and touching the soft key. The Select Language Menu provides a simple way to select the language used on the display (nine different languages: English, French, Dutch, Spanish, Italian, German, Czech, Polish and Russian).

Touch the and soft keys to select the required language then touch the soft key to store the setting.
5.9. Boiler Information

Boiler Information can be viewed by selecting the Boiler Information icon and pressing the OK button. Boiler Information provides real time operating information of the INSTINCT.

Boiler Information displays six boiler readings at a time. Each line contains an information item followed by its current value. Touch the ▲ and ▼ soft key to scroll through additional information items.

Some information items include a logging function. Select the information item then touch the ◙ soft key to view its graph.

One sample is recorded every 12 minutes to produce a graph of the last 24 hours.

The following items have a logging function:
- Boiler Firing Rate
- Ionization Current
- Boiler Setpoint
- Boiler Supply Temperature
- Boiler Return Temperature
- Boiler Flue Temperature
- Outdoor Temperature
- DHW Storage Temperature
- External Modulation Signal
- Pressure
### CHAPTER 5 - CTRLMAX OPERATION

#### 5.9.1 Information Items

<table>
<thead>
<tr>
<th>Information Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Boiler Status</td>
<td>Displays the current operating state of the INSTINCT. This is the same as the status line on the home screen.</td>
</tr>
<tr>
<td>Heating Call</td>
<td>Displays if a central heating call is present.</td>
</tr>
<tr>
<td>DHW Call</td>
<td>Displays if a domestic hot water call is present.</td>
</tr>
<tr>
<td>Boiler Firing Rate</td>
<td>Displays the current firing rate of the INSTINCT.</td>
</tr>
<tr>
<td>Ionization Current</td>
<td>Displays the current flame ionization current from the ignitor.</td>
</tr>
<tr>
<td>Boiler Setpoint</td>
<td>Displays the current setpoint of the INSTINCT.</td>
</tr>
<tr>
<td>Supply Temp.</td>
<td>Displays the current supply temperature of the INSTINCT.</td>
</tr>
<tr>
<td>Return Temp.</td>
<td>Displays the current return temperature to the INSTINCT.</td>
</tr>
<tr>
<td>Boiler Flue Temp.</td>
<td>Displays the current flue temperature of the INSTINCT.</td>
</tr>
<tr>
<td>Outdoor Temp.</td>
<td>Displays the current outdoor temperature.</td>
</tr>
<tr>
<td>DHW Storage Temp.</td>
<td>Displays the current DHW storage temperature when Indirect Water Heater Sensor PSRKIT22 is installed.</td>
</tr>
<tr>
<td>External Modulation Signal</td>
<td>Displays the current external modulation signal being received from an external controller.</td>
</tr>
<tr>
<td>Pressure</td>
<td>Displays the current system water pressure.</td>
</tr>
<tr>
<td>CH Ignitions</td>
<td>Displays the number of central heating ignitions since the unit was installed. This counter increases in increments of twenty.</td>
</tr>
<tr>
<td>CH Runtime</td>
<td>Displays the number of hours the INSTINCT has run for a central heating call since the unit was installed.</td>
</tr>
<tr>
<td>DHW Ignitions</td>
<td>Displays the number of domestic hot water ignitions since the unit was installed. This counter increases in increments of twenty.</td>
</tr>
<tr>
<td>DHW Runtime</td>
<td>Displays the number of hours the INSTINCT has run for a domestic hot water call since the unit was installed.</td>
</tr>
<tr>
<td>Mix Zone Temperature</td>
<td>Displays the current low temperature mix zone temperature.</td>
</tr>
</tbody>
</table>
5.10. Lockout History

Lockout History can be viewed by selecting the Lockout History icon and pressing the **OK** button. The Lockout History Screen lists the last eight lockouts along with how long ago they occurred.

Lockout History displays the last eight lockouts. The newest lockout is displayed at the top of the screen.

The lockout message is followed by how long ago the error occurred.

Touch the **¶** and **µ** soft keys to scroll through additional lockouts.

Lockout Details displays the lockout at the top of the screen followed by a snapshot of the boiler information recorded at the time of the lockout.

Touch the **¶** and **µ** soft keys to scroll through additional information items.
CHAPTER 5 - CTRLMAX OPERATION

5.10.1 Lockout Screen

If a problem occurs, the Lockout Screen replaces the Home Screen. The backlight will remain on until the lockout is reset.

Pressing any arrow button will return to the Home Screen so that additional troubleshooting can be performed. See Sections 5.10.2 on page 22 and 5.10.3 on page 23 for a list of lockouts and descriptions.

The lockout message is displayed at the top of the screen

Low Water

Water pressure has fallen below an acceptable operating level. Increase pressure to normal range. Boiler will automatically reset once water level returns to normal.

If problem persists, call for service

E37

Press any ARROW Button

Press any ARROW button to return to the Home Screen while locked out.
The Main Menu can then be entered from the Home Screen to help diagnose the problem.
Select the Home Screen icon at the bottom of any menu screen to return to the Lockout Screen.

The status line now displays the lockout

</table>
Additional quality water heating equipment available from Triangle Tube

Maxi-Flo Pool and Spa Heat Exchangers

- Constructed of high quality corrosion resistant stainless steel (AISI 316) or titanium
- Specially designed built-in flowrestrictor to assure maximum heat exchange
- Compact and light weight
- Available in 8 sizes to accommodate any size pool or spa

SMART Indirect Fired Water Heaters

- Exclusive Tank-in-Tank design
- Stainless steel construction
- Available in 7 sizes
- Limited LIFETIME residential warranty
- 6 Year limited commercial warranty
- Self cleaning/self descaling design

TTP Brazed Plate Heat Exchangers

- For domestic water, snow melting, radiant floor
- Plates made of stainless steel, with 99.9 % copper brazing, ensuring a high resistance to corrosion
- Self cleaning and self descaling
- Computerized sizing available from Triangle Tube
- Available in capacities from 25,000 BTU/hr to 5,000,000 BTU/hr

Triangle Tube - 1240 Forest Parkway, Suite 100, West Deptford NJ 08066
